

## 2009 Pesticide Container Collection Program

In 2009 the SDDA Waste Pesticide and Recycling took steps to improve our program by purchasing a tractor trailer with a portable granulator that allows for grinding of small containers onsite. With these changes we were able to show a 28% increase in containers collected over 2008.

In 2009 we collected 135,863 two and a half gallon and smaller containers, 880 poly drums, 45 steel drums, and 503 shuttles as well as 26,190 pounds of waste pesticide. We have shipped 103 super sacs or 95,701 pounds of granulated plastic to Container Services Network for recycling. We also shipped one load with 520 poly drums and two loads of shuttles totaling 404. The Container Collection program has shown a steady increase in participation since 2004.
