

**APHIS Rangeland Grasshopper and Mormon Cricket Suppression Program  
FY-2012 Treatment Guidelines  
Version 03/15/12**

The objectives of the APHIS Rangeland Grasshopper and Mormon Cricket Suppression Program are to 1) conduct surveys in 17 Western States; 2) provide technical assistance to land managers; and 3) when funds permit, suppress economically damaging grasshopper and Mormon cricket outbreaks on federal, tribal, state, and/or private rangeland. The Plant Protection Act of 2000 provides APHIS the authority to take these actions.

**General Guidelines for Grasshopper / Mormon Cricket Treatments**

1. All treatments must be in accordance with:
  - a. the Plant Protection Act of 2000;
  - b. applicable environmental laws and policies such as: the National Environmental Policy Act, the Endangered Species Act, the Federal Insecticide, Fungicide, and Rodenticide Act, and the Clean Water Act (including National Pollutant Discharge Elimination System requirements – if any);
  - c. applicable state laws;
  - d. APHIS Directives pertaining to the proposed action;
  - e. Memoranda of Understanding with other Federal agencies.
2. Subject to the availability of funds, on request of the administering agency or the agriculture department of an affected State, APHIS, to protect rangeland, shall immediately treat Federal, State, or private lands that are infested with grasshoppers or Mormon crickets at levels of economic infestation, unless APHIS determines that delaying treatment will not cause greater economic damage to adjacent owners of rangeland. In carrying out this section, APHIS shall work in conjunction with other Federal, State, and private prevention, control, or suppression efforts to protect rangeland.
3. Prior to the treatment season, conduct meetings or provide guidance that allows for public participation in the decision making process. In addition notify federal, state and tribal land managers and private landowners of the potential for grasshopper and Mormon cricket outbreaks on their lands. Request that the land manager / land owner advise APHIS of any sensitive sites that may exist in the proposed treatment areas.
4. Consultation with local tribal representatives will take place prior to treatment programs to fully inform the tribes of possible actions APHIS may take on tribal and neighboring lands.
5. The federal government will bear the cost of treatment up to 100 percent on federal, tribal, and Trust land, 50 percent of the cost on state land, and 33 percent of cost on private land. There is a 16.15% overhead charge on Federal involvement in treatments on any lands that a cost share is involved.
6. Land managers are responsible for the overall management of rangeland under their control to prevent or reduce the severity of grasshopper and Mormon cricket outbreaks. Land managers are encouraged to have implemented Integrated Pest Management

## **APHIS Rangeland Grasshopper and Mormon Cricket Suppression Program FY-2012 Treatment Guidelines**

Systems prior to requesting a treatment. In the absence of available funding or in the place of APHIS funding, the federal land management agency, tribal authority or other party/ies may opt to reimburse APHIS for suppression treatments. Interagency agreements or reimbursement agreements must be completed prior to the start of treatments which will be charged thereto.

7. There are situations where APHIS may be requested to treat rangeland that also includes areas where crops are being grown (typically less than 10 percent of the treatment area). In those situations the crop owner pays the entire treatment costs on the croplands. Note: the insecticide being considered must be labeled for that crop as well as rangeland.
8. In some cases, rangeland treatments may be conducted by other federal agencies (e.g., Forest Service, Bureau of Land Management, or Bureau of Indian Affairs) or by non-federal entities (e.g., Grazing Association or County Pest District). APHIS may choose to assist these groups in a variety of ways, such as:
  - a. loaning equipment;
  - b. contributing in-kind services such as surveys to determine insect species, instars, and infestation levels;
  - c. monitoring for effectiveness of the treatment;
  - d. giving technical advice
9. In areas considered for treatment, State-registered beekeepers and organic producers shall be notified in advance of proposed treatments. If necessary, non-treated buffer zones can be established.

### **2012 Operational Procedures**

#### ***GENERAL PROCEDURES FOR ALL AERIAL AND GROUND APPLICATIONS***

1. Follow all applicable federal, state, tribal and local laws and regulations in conducting grasshopper and Mormon cricket suppression treatments.
2. Notify residents within treatment areas, or their designated representatives, prior to proposed operations. Advise them of control method to be used, proposed method of application, and precautions to be taken.
3. One of the following insecticides that are labeled for rangeland use can be used for a suppression treatment of grasshoppers and Mormon crickets:
  - a) Carbaryl
    - a. solid bait
    - b. ultra low volume spray
  - b) Diflubenzuron ultra low volume spray
  - c) Malathion ultra low volume spray

**APHIS Rangeland Grasshopper and Mormon Cricket Suppression Program  
FY-2012 Treatment Guidelines**

4. Do not apply insecticides directly to water bodies (defined herein as reservoirs, lakes, ponds, pools left by seasonal streams, springs, wetlands, and perennial streams and rivers).

Furthermore, provide the following buffers for water bodies:

- 500-foot buffer with aerial liquid insecticide
  - 200 foot buffer with ground liquid insecticide
  - 200-foot buffer with aerial bait
  - 50-foot buffer with ground bait.
5. Instruct program personnel in the safe use of equipment, materials and procedures; supervise to ensure procedures are properly followed.
  6. Conduct mixing, loading, and unloading in an approved area where an accidental spill would not contaminate a water body.
  7. Each treatment program will have a treatment manager on site. Each State will have at least one Contracting Officer's Representative available to assist in GH/MC suppression programs.
  8. APHIS will assess and monitor rangeland treatments for the efficacy of the treatment, to verify that a suppression treatment program has properly been implemented and assure that any environmentally sensitive sites were protected.
  9. APHIS reporting requirements associated with grasshopper / Mormon cricket suppression treatments can be found in the APHIS Grasshopper Program Guidebook:  
[http://www.aphis.usda.gov/import\\_export/plants/manuals/domestic/downloads/grasshopper.pdf](http://www.aphis.usda.gov/import_export/plants/manuals/domestic/downloads/grasshopper.pdf)

***SPECIFIC PROCEDURES FOR AERIAL APPLICATIONS***

1. APHIS Aerial treatment contracts will adhere to the 2012 Statement of Work.
2. Minimize the potential for drift and volatilization by not using ULV sprays when the following conditions exist in the spray area:
  - a. Wind velocity exceeds 10 miles per hour (unless state law requires lower wind speed);
  - b. Rain is falling or is imminent;
  - c. Dew is present over large areas within the treatment block;
  - d. There is air turbulence that could affect the spray deposition
  - e. Temperature inversions (ground temperature higher than air temperature) develop
3. Weather conditions will be monitored during application and treatment will be suspended when conditions could jeopardize the correct spray placement or pilot safety.

FY-2012 Treatment Guidelines**

4. Application aircraft will fly at a median altitude of 1 to 1.5 times the aircraft's wingspan.
5. Whenever possible, plan aerial ferrying and turnaround routes to avoid flights over congested areas, water bodies, and other sensitive areas that are not to be treated.
